## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-28 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

3. Regarding claims 1, 14 and 16, the phrase "such that" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

Claims 2-13, 15 and 17-28 depend upon independent claims 1, 14 and 16 and therefore, are rejected too.

The term "the first RPC" in claim 1, line 12-13 renders the claim indefinite. The term "the first RPC" should read as "the second RPC".

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 29-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Geometric Invariants for Rational Polynomial Cameras, by Barrett et al., IEEE 0-7695-0978-9/00 (hereinafter Barrett).

With respect to claim 29, Barrett discloses first and second aerial images having respective first and second sets of rational polynomial coefficients (RPCs), wherein the first and second aerial images and the rectified image include overlapping image locations, (see abstract, figure 1, and section 2 on page 226). However, he fails to explicitly disclose generating the height information as claimed in the claims. But, as shown in the figure 1, the Z is the third axis as the height of the object. Therefore, it would have been obvious to one ordinary skilled in the art at the time of invention to simply utilize the teachings of the Barrett, to consider the height information derivation in order to locate the object in the space.

With respect to claim 29, he further discloses, the first and second aerial images are not stereographic images, (see figure 1, the two cameras 1 and 2 taking the image of the object "stereographic images") as claimed.

With respect to claim 30, he further discloses, generating a version of the rectified image that includes the height information, (see page 225 last half page to page 226 second column) as claimed.

***Allowable Subject Matter***

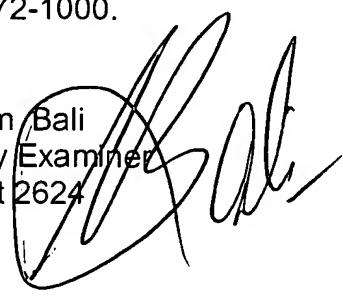

6. Claims 1-28 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.
